Behavior Modeling in Social Networks

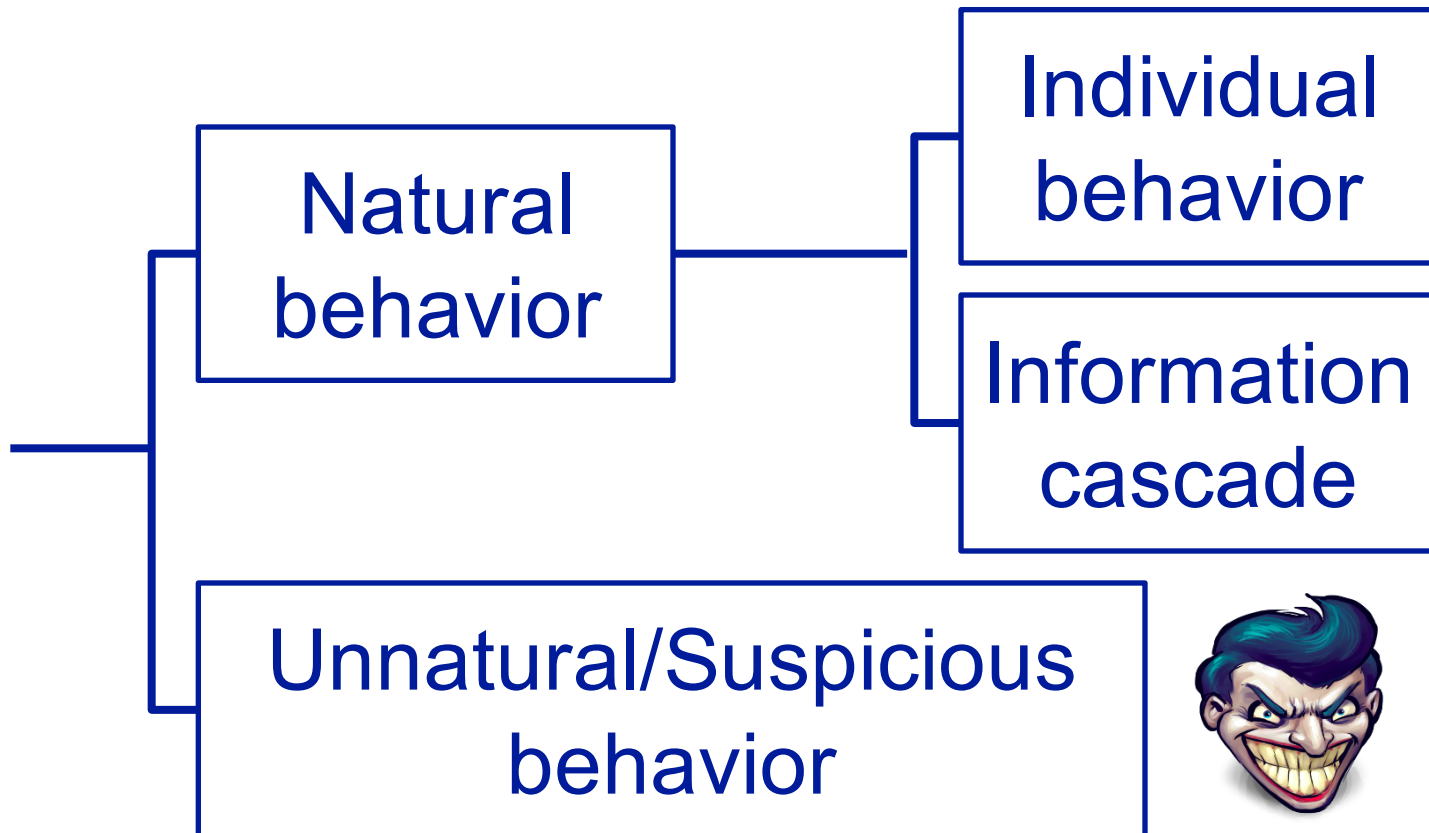

# Six Disruptive Basic Research Areas, by DOD

## Basic Research Areas

- Six Disruptive Basic Research Areas
  - Engineered Materials (metamaterials and plasmonics)
  - Quantum Information and Control
  - Cognitive Neuroscience
  - Nanoscience and Nanoengineering
  - Synthetic Biology
  - Computational Modeling of Human and Social Behavior

# From Micro to Macro

# Modeling Individual Behavior

- ❖ Pattern discovery, prediction and social recommendation
- ❖ ContextMF: Social contexts (preference & influence)
- ❖ FEMA: Spatiotemporal contexts (multi-faceted & dynamic)
- ❖ Hybrid Random Walk: Social bridging multiple domains

# Modeling Cascading Behavior

- ❖ Before predicting information spreading, understanding the behavioral mechanism is critical and fundamental.
- ❖ Behaviors can be modeled in different granularities, which depends on the target problem.
- ❖ Modeling information spreading with continuous-time model is promising and demonstrated to be effective in our research.

# Detecting Unnatural Behavior

- ❖ Suspicious behavioral patterns
  - ❖ Lockstep pattern: CopyCatch, LockInfer
  - ❖ Synchronized pattern: CatchSync
  - ❖ Multi-dimensional suspiciousness: CrossSpot

# Acknowledge
